Keywords:

Harry Potter, flowers, magic

Article Body:

If you've been paying any attention at all to the world of movies and books in the last several years, you've probably heard in the name of a new species of flower found in Ecuador. The name of this new flower is Macrodon

Central to the discovery of this new flower was Lena Struwe, an assistant professor of ecology and evolution at the University of Colorado Boulder. In fact, a fan of the young wizard. The flower was so named because the discovering team conducted a magical experiment that seemed to apparate.

Now, while the discovery of a new flower species is an exciting event, the magic that flowers have is what makes them so special.

Over the many years I've been in the flower industry, I've had the opportunity to create flowers that are as magical as the ones found in nature.
