

Title:

Die Cutting

Word Count:

314

Summary:

Die Cutting is a procedure by which a material is cut to an exact design or shape with the help of a die.

Keywords:

Die Cutting, Die Cutting Equipment, Custom Die Cutting, Die Cutting Machines

Article Body:

Die Cutting is a procedure by which a material is cut to an exact design or shape with the help of a die.

For cutting a wide range of objects simply and quickly, the machines use steel rule dies. Use of dies is the most common method of die cutting.

Different types of die cutting are available. The most popular are the steel rule, rotary, laser, and ultrasonic die cutting.

The die cutting process is found in several areas of industry. A distinctive shape is an important factor in the design of a die.
