I have found that the best method of doing this is simply to clean the surface with an alcohol

You will find that the alcohol may take 30 seconds to evaporate, however when this has complet

Now, as these labels are highly tacky you need to make sure you get the label on straight beca

Sometimes I recommend you mark out the corners with a little marker pen so you have a rough id

The next stage is to wait. With vinyl destructible I'd recommend 2 hours for 40% strength, 1 d

I hope this has helped.
