Is your computer been running slower than normal? Are you worried someone may be able to access

Some time back, my 3-year old computer was running so slow that I had to buy a new computer. C

The truth is, we can all put up with a slow computer, but very few of us would want others to

According to Spyware Nuker's web site, ^Spyware applications are programs and files that hide

The web site also provides statistics that show spyware is a huge problem effecting many peopl

In addition, it is very easy for your computer to become infected with spyware as "The majorit

No matter how we get spyware, here are 10 very real reasons you don't want spyware on your com

1. Your computer may start running slower
2. Some programs on your computer will not run correctly
3. You may not recognize programs that are now on your computer because they may have been ins

In addition, you might be worried that:

4. Someone might be able to read your e-mails
5. Someone might be able to access your e-mail list
6. Someone might be able to see you track the keystrokes you type
7. Someone might be able to access your credit card information on your pc
8. Someone might be able to access your passwords list on your computer
9. Someone might be able to steal your social security number
10. Someone might be able to track all the web sites you visit

As I mentioned, most of these programs get on your computer with out you even knowing, but and

A great way to find and remove spyware is to run a spyware detector and remover. Most spyware
