Article Body:

No sane person would ever like someone else reading her email. Or for that matter some other p

A password, if too short, is vulnerable to attack if an attacker gets hold of the cryptographi

On the other hand, a strong password would be sufficiently long, random, or which can be produ

For maximum security, the user should follow some simple guidelines:

- 1) Passwords should preferably be at least 8 characters long and not more than 14.
- 2) Passwords should contain a mix of numbers, letters, and special characters (%&acirc;3ac\_ht4@m
- 3) Passwords should not contain a dictionary word from any dictionary, be it French, Spanish,
- 4) Each password should be different from the user's User-ID and any permutation of that User-
- 5) New passwords and old passwords should differ by at least 3 characters.
- 6) Avoid picking names or nicknames of people, pets, or places, or personal information that o
- 7) It's wise to stay away from common keyboard sequences, such as dfg678 or abc345 .
- 8) Never form a password by appending a digit to a word. That can be easily guessed.
- 9) Avoid writing your password down or storing it on your computer.
- 10) Never share your password with anyone else.
