Obsolete Computers: Environmental Threats

Obsolete computers that are simply dumped in the garbage drums are the biggest threat to the environment.

Therefore, we must handle the obsolete electronic devices carefully. Moreover, different environmental agencies

There are several methods to deal with old computers. Some of them are as follows:

- Give It For Reuse: If your computer is in a decent condition, you can sell it to a company or individual who can reuse it.
- Trade It In: There are many computer dealers (e.g. HP) who offer trade-in promotions on computers.
- Auction It: You can sell the computer on eBay or any other auction site. You can also organize an auction.
- Set up a Server: You can continue using the old computer as a server to store and share data.
- Salvage Some Parts: You can see which parts of your computers are in good working condition.

Go for computer recycling and save the planet earth!
