Professionally, headphones are used in editing videos and incorporating sound, or for recordin

There are hundreds of applications for headphones. If you want to choose the type of headphone

- Driver - the part of the headphone that produces the sound.

- Earpiece - this holds the driver up to your ear. There are earpieces that cover the entire p

- Attachment system - depending on the type of headphones, the attachment system ensures that

- Finally, the other parts are the headands, for types which require one, and the wires and ja

Headphones are typically attached to devices such as mobile phones, CD or MP3 players,walkman,

There are two types of headphones:

1. Sound-proof

This type of headphone is used when you want to isolate youuself from the sounds of the outsid

You can use this in loud environments so that the sound coming from your music player or any o

Sound-proof headphones are mostly the types which have headbands and the earpiece surrounds th

These have monitors designed to fit the inner ear. They have a sealed design, and if you want

They are designed to "cancel" outside noise.

Generally, the open type design offers better sound quality than the sound-proof variant.

2. Open-type

This type of headphones generally have a greater sound quality than the enclosed, sound-proof

The open design makes for a more effective listening device.

In terms of design, there are also hundreds of types to choose from. Here are some examples:

- Clip-ons

This type does not have headbands. The attachment system of clip-on headphones comprise of two
ears.

- Wireless

This is convenient because it frees you up from wires and lets you move around freely while li

- In-ear-monitor.
