

Title:
Music Phones

Word Count:
356

Summary:
You sometimes see cell phone manufacturers talk about music phones. What is it then? A music phone is a cell phone that has a music player built in. Sony Ericsson introduced the Walkman phones, Motorola launched the ROKR iTunes and Nokia delivered the N90.

Keywords:
music phones,mp3 player,cell phones

Article Body:
You sometimes see cell phone manufacturers talk about music phones. What is it then? A music phone is a cell phone that has a music player built in. Sony Ericsson introduced the Walkman phones, Motorola launched the ROKR iTunes and Nokia delivered the N90. More than 100 million music phones were sold in 2005 and that is more than double the number of cell phones sold in 2004.

Music Phone Characteristics

Here is some typical characteristics of a music phone. When comparing music phones look at the following:

- Large memory (hard disk)
- Support for popular audio formats (MP3, AAC...)
- Good sound quality
- Support for the standard headphones 3.5mm jack
- Dedicated music keys
- Good music software (for PC and Phone)
- Easy to upload music to phone (via bluetooth or USB)
- Easy access to OTA (over-the-air) downloads
- Extended battery time
- FM radio

Music Phones 2005

Here is a couple of examples of music phones released in 2005.

Nokia 3250

This phone has dedicated music keys and can store up to 1 GB (Gigabyte) of music and offers 100MB of free memory.

Sony Ericsson W900i

Sony Ericsson W900i is a 3G phone and you can download, transfer, manage and play music from a PC or a music server.

The W900i's internal 470 MB memory provides space for between 120 and 240 songs. You can increase the memory by using a memory card.
