

Title:

Printer Toner Safety: The Dust Musts

Word Count:

308

Summary:

When changing printer toner, one's first priority is often getting the printer running as quickly as possible.

While printer toner itself isn't a health hazard, its fine powder in high concentration can be a health hazard.

Keywords:

printer, printing, toner, toner cartridges, OEM, printer toner, laser printer toner, printer toner

Article Body:

When changing printer toner, one's first priority is often getting the printer running as quickly as possible.

While printer toner itself isn't a health hazard, its fine powder in high concentration can be a health hazard.

How can this dust become airborne? You'd be surprised at how easy it is. Improper disposal of toner cartridges is a common cause.

Some laser printer toners are considered carcinogens, or cancer causing, increasing the risk of cancer.

So take precautions. Vacuum, don't sweep or brush, spilled toner dust. Clean up desktops or surfaces.

If you experience shortness of breath or persistent coughing, stop working with the printer toner.

Since 1999, <http://www.TonerDealers.com> has been one of the largest toner resources online, serving the toner industry.
