Article Body:

Spyware is a broad term used for certain types of software that are downloaded onto your computer.

Spyware is placed on your computer in order to track your internet surfing habits. It knows everything you do on the internet.

Adware is another type of spyware. It doesn't work by tracking your information as spyware does.

The spyware business is a billion dollar a year industry with people getting very rich selling spyware.

In order to not fall prey to these types of malwares there are steps you can take. First, don't download software from untrusted sources.

Run an anti spyware software program often along with your virus protection software. Generally, you should run an anti spyware program once a week.
