bluetooth network

Article Body:
If you are unfamiliar with the term Personal Area Network, it simply refers to your computer and its peripherals. Add to this the fact that you may need to add a USB hub into the equation and you are looking at a lot of cables. So, if it is all getting too much for you it may be time to think about setting up a Bluetooth Personal Area Network. If you are setting up a Personal Area Network from scratch you may want to set up a fully wireless network. Either way, the first thing you need is a computer with Bluetooth capabilities. By now, most new computers have Bluetooth. Now that you have a Bluetooth-enabled computer, you can start to think about about what Bluetooth peripherals you want. Keyboard and mouse

The two essentials of any Personal Area Network. Without these you won't be getting too much done. If you spend a lot of time on the road these are an excellent option as they can allow you to stay connected. Cell phones and PDAs

For many people, this is where a Bluetooth Personal Area Network will really come into its own. Headsets

A Bluetooth headset is almost an essential these days, especially if you spend a lot of time in a car. Other peripherals

There are any number of other gadgets and peripherals you can add to your Bluetooth network. You can even use a Bluetooth mouse. There are also plenty of weird and wonderful Bluetooth peripherals for you gadget fans. For example, a Bluetooth remote control. So, whether you want to boost your productivity and improve your working environment, or you just want to stay connected
