Most people have a television set these days, but very few actually understand the process by

There are three basic steps involved in the transmission of a television programme. These are:

- Material ~ this is the programme itself
- Master control ~ this selects the programme to be transmitted
- Effects ~ this includes the network identifier

The programme itself can be in a number of different formats. A live transmission is where the

The master control operator, or transmission operator, is responsible for selecting the correct

If the material is pre-recorded, either on tape or server, the operator is responsible for sta

The effects that we see on many television programmes have become so common that we often don't
