Article Body:

An intercom is an electronic communication system that is commonly found in hospitals, schools

The intercom is now becoming a popular component not only of workplaces but also of every house

1. Set your budget. The first important thing to do before shopping for an intercom system is

2. Know the basics. Different brands may have different systems, but their basic components are

*The master station - also known as the central control panel, this is the unit that controls

*The sub-stations/door stations - also known as the speakers or slave units, these are connected

*The power supply - this feeds power to all the units in order to make them function.

3. Determine the range that you want. Different intercom systems have varying ranges, with some

Choosing the range of your intercom system depends on their use and purpose, which can vary from

In general, intercoms are usually used for the following purposes:

*To connect different rooms.

*To connect rooms to a central office.

*To broadcast announcements/as a public address system.

*To function as a 'bell', especially at schools (to signal the change of classes) and at home

4. Check its compatibility with your home (or building) structure. The ability of the intercom

5. Choose the desired type of intercom system. Intercom systems can either be hard-wired or wireless

*Hard-wired or traditional intercom systems - these require wires to connect the entire system

*Wireless intercom systems - these units may be more costly than the traditional, hard-wired ones

6. Determine the power supply to be used. Intercom systems can perform with either of the following

*An AC power outlet (or a 12 volts DC power supply)

*Batteries (needs regular replacement)

7. Check the product's warranty. In a way, the length of an intercom's warranty, including the

8. Transact business with experienced dealers that are known for their reputation. They will n

By following the guidelines that are mentioned above, shopping for a perfect intercom will sur
