

Title:

Which computer printer technology would you go for?

Word Count:

319

Summary:

A computer printer is a device that produces human readable text or graphics in electronic form.

Keywords:

computer printer technology, printer technology, toner based printers, inkjet printers, impact printers

Article Body:

A computer printer is a device that produces human readable text or graphics in electronic form.

The following printer technologies are found in modern printers

- Toner based printers: Toner based printers are very similar to photocopiers. They refer to toner based printers.
- Inkjet Printers: Inkjet printers are cheaper than laser printers but they are expensive to maintain.
- Impact Printers: Impact printers rely on a forcible ink to transfer ink to the media. They are used in industrial environments.
- Line Printers: Line printers print an entire line of text at a time. These printers were the first to be used in business environments.
