parfumuri, parfume

Article Body:

The precise formulas of commercial perfumes are kept secret. Even if they were widely published

The most practical way to start describing a perfume is according to its concentration level,

Concentration levels

Perfume oil is necessarily diluted with a solvent because undiluted oils (natural or synthetic)

By far the most common solvent for perfume oil dilution is ethanol or a mixture of ethanol and

As the percentage of aromatic compounds decreases, so does the intensity and longevity of the

Furthermore, some fragrances with the same product name but having a different concentration n

For instance, in order to make the EDT version of a fragrance brighter and fresher than its E

Olfactive families

Grouping perfumes, like any taxonomy, can never be a completely objective or final process. Ma

Classification by olfactive family is a starting point for a description of a perfume, but it
