Article Body:

Did you think the non-inflation adjusted record high in oil and gas prices form hurricane Katrina

In the late seventies and early eighties automobile ownership in China was virtually non-existent

The oil production decline rate, sometimes referred to as Hubbert's production curve or peak oil

Shortages of unleaded gas could potentially occur this summer because the U.S. ethanol industry
Imports of ethanol could possibly meet demand but are currently subject to a 54-cents-per-gallon

The current standoff between the United States and Iran, OPEC's no.2 oil producer, over Tehran

AccuWeather has forecasted the 2006 hurricane season, which starts June 1 and runs through Dec

Due to political instability and rising violence in Nigeria, oil companies
have suspended the production of over 600,000 barrels per day of crude oil.
Don't expect any quick resolutions to these long-term problems in Nigeria. At present, over 20

Crude oil demand is rising at a very fast pace. At present, it's increasing around 1.75 million

Many of the world's major oil fields are very old and potentially are nearing or have already

It was estimated after the Iraq invasion that this area would produce close to 5 million barrels

Crude oil prices recently broke out of a long-term bullish symmetrical triangle trend continua

All of these points really lead to the potential ^perfect storm~ in regards to oil pricing. Pe
