

Title:

Making Money on the Global Warming Crisis

Word Count:

1946

Summary:

Looks like global warming and climate change could kill most of us. Some financiers see a way

Keywords:

drought, famine, global warming, energy, nuclear, uranium, climate change, gold, Arctic Circle

Article Body:

Bad weather may be heading our way. Many very smart voices have raised their volume over the m

What's the alternative? Move to the Arctic Circle, where you may someday bask year around with

Now, another brainy man, with whom we have many chats this year, has issued a special 56-page

Take Your Pick: Nuclear Energy or Cheap Arctic Land

Aside from optioning to buy vast tracts of land near the Arctic Circle, as Dr. Lovelock's conc

According to Bambrough, current global uranium mining production rests at about the 100 millic

This may become the new case for a sustained rally in the spot uranium price. Bambrough wrote,

^Marginal mines will become price setters,~ wrote Bambrough. This helps explain why the Sprott

^Large low-cost producers may be able to reap Middle East-like oil profits for decades,~ wrote

Rising uranium prices are probably more of an irritation for fuel traders than the utilities,

What else can be done aside from a worldwide, unanimous endorsement of nuclear energy? There m

The Sprott report co-authors concluded there will be supply problems for food, water and energ

Is this too much reality for you? Should we just wait a while and see what transpires? We migh

In other words, Messrs. Sprott and Bambrough are correct in their assumptions and conclusions.

For a second opinion, before completing this column, we forwarded the Sprott report to David M

One key question remains unanswered, during our two-year investigation into uranium and nuclear energy. If there is not, today's spot uranium price could look comparable to gasoline prices, circa 1970.
