There's just no argument about it. Drug overdose can either be accidental or intentional. It can happen to people of any age. Accidental overdose is most common in very young people. Celebrities are prone to drug overdose due to the stress and pressure their career and lifestyle. She was hotness personified. She did not only grace the cover of Playboy but even bagged Anna Nicole Smith, who was born Vicki Lynn Hogan on November 28, 1967, in Houston, Texas. Unfortunately, after a series of controversies such as marrying a very senior citizen, Howard Stern, the headline reads: ^An accidental overdose of prescription drugs killed former reality star Anna Nicole Smith. The headline reads: ^An accidental overdose of prescription drugs killed former reality star Anna Nicole Smith. Howard K. Stern, Smith's lawyer and rumored lover, sent a statement calling the death an accident. Several prescription medications were discovered inside the hotel room and were all unaccounted for. According to Perper, the drugs in Smith's system acted on the respiration and circulation. Autopsy results showed evidence that Smith had an abscess in her left buttock that had ruptured. The remains of Anna Nicole Smith was buried in the Bahamas last March 2, 2007 next to her husband.
