Annual Water Well Checkup And Water Test Make Sense

Article Body:

What if your doctor never did an examination or test until you became critically ill?

That may sound crazy but in much the same way, many water well owners rarely, if ever, have their

The National Ground Water Association (NGWA) recommends that well owners get an annual maintenance

If you haven't gotten a well maintenance checkup and water test in the past 12 months, now would be the time.

A well checkup should include:

&#8226; A flow test to determine well output.

&#8226; A water-level check before and during pumping, if possible.

&#8226; A pump motor performance check including amp load, grounding and voltage.

&#8226; A pressure tank and pressure switch contact check.

&#8226; A well equipment inspection to ensure it is sanitary and meets local codes.

&#8226; A water test for coliform bacteria, nitrates and anything else of local concern.

&#8226; A clearly written report that explains results and recommendations, and includes all 1

Your water should be tested any time there is a sudden change in its appearance, taste or odor.

To further protect your water supply, keep hazardous substances properly stored and away from

"We take care of the things we value. When you stop to think how important good drinking water

You can arrange a checkup by contacting a water well contractor who performs the type of maint
