Article Body:

In direct opposition of the old saying, size may actually matter. At least, they appear to matter.

The research speculated that certain conditions in the mother's womb that lead to smaller babies.

One problem with this conclusion, however, is the fact that the research team did not really do a long-term study.

There were also other things that proved notable, even if not all the pertinent data was taken into account.

Still, as stated above, the idea has not yet been proven conclusively. There is still a large amount of research to be done.
