

Title:

Bone Hormone: A Startling Discovery For Diabetes Treatment

Word Count:

770

Summary:

While it is true that elevated blood sugar is the defining feature of diabetes, the reasons for

Keywords:

infections, inflammation

Article Body:

A startling new discovery about a hormone released from the bone is significantly changing science. However, new research suggests that the issue is even more complex than what it seems to be. A While it is true that having elevated blood sugar is the defining feature of diabetes, the reasons for. When researchers from Columbia University Medical Center published the results last summer, so. In his previous work, he had shown that a hormone produced by fat, called leptin, is an important. Patients with Type 2 diabetes no longer heed the hormone's directives due to the cells' resistance. Should osteocalcin work in humans as well, it can be considered as a "unique new treatment" for. The immune system is considered to be another cause of glucose regulation. In 2003, researchers. Scientists have long suspected that inflammation was somehow related to insulin resistance, which. A number of researchers agree that obesity is accompanied by a state of chronic, low-grade inflammation. Should more research prove the initial findings to be true, there would be certainly greater hope.
