

Title:
Curved Stair Lifts

Word Count:
534

Summary:
This article has some information about curved stair lifts.

Keywords:
stair lifts, stair chairs, stairlifts, lift chairs

Article Body:
A stair lift is a piece of home medical equipment that is used to carry people up and down the stairs. When you purchase a stair lift for a straight stair case, the rail system is cut to fit your stairs. The fact that your track must be custom built translates into much higher costs for the consumer. In some instances it is actually possible to install 2 straight stair lifts in the place of 1 curved stair lift. If you have no other recourse than to get a curved stair lift, you will want to do a good deal of research.
