Article Body:

If you suffer from muscular dystrophy than some of even the most remedial chores can be excruciating.

Most lift chairs utilize a motor to raise and lower the cushioned portion of the chair. At the same time, they also have a motor to rotate the chair.

You should generally only buy new lift chairs, unless you really know the person it is coming from.

If you suffer from muscular dystrophy or any other disability that makes it hard to stand or sit, a lift chair can be a great help.
