Article Body:

It may come as a surprise to learn how many different types of wood are used in furniture making.

The hardwood Teak comes from the Teak (Tectona) tree, which grows in southern Asia. The teak is a very hard and durable wood. There are three different types of teak tree: the Tectona grandis (the common teak), the Tectona officinalis (the Indian teak), and the Tectona peruviana (the Peruvian teak).

Teak has been popular in furniture making for hundreds of years due to its attractive look and durability.

Although teak wood does have remarkable qualities that protect it against harsh weather, it is not immune to decay.

The older the teak tree, the harder and denser the wood, which means it doesn't split as easily.

Teak can be used to make almost any type of patio furniture including chairs, tables, planters, and benches.

As an extremely durable hardwood, teak makes an attractive and sensible choice for the furniture.
