Article Body:

Many web sites seem to have graphics and moving images on their pages, some even have music, p  
The problem with this is the time it takes for the page to load.

Many visitors to a website will not wait for the graphics to download they will simply back ou

High resolution graphics and music is fine for most people with a high speed broadband connect

For the web designer themselves it is wise to test the website you have created on a 28.8 conn

A tip is to make your graphics smaller in size and to use fewer colours, instead of a million,

Instead of using graphics you can try colouring the cells, or changing the colour of borders.

The thing to remember when developing a website is that less is more, we live in a world where
