

Title:

HDTV FYI!

Word Count:

384

Summary:

With all of the abbreviations flying around the stores and commercials, it is very easy to be confused.

HDTV is one of these offenders! HDTV stands for High Definition Television and means the broadcast.

Generally HDTV is broadcast digitally, i.e. together with cable, satellite, or a digital receiver.

Keywords:

hdtv,high definition tv,receivers

Article Body:

With all of the abbreviations flying around the stores and commercials, it is very easy to be confused.

HDTV is one of these offenders! HDTV stands for High Definition Television and means the broadcast.

Generally HDTV is broadcast digitally, i.e. together with cable, satellite, or a digital receiver.

There are three things you need to be able to view HDTV and these are firstly a source, such as a station.

For the set you can choose from an integrated HDTV, which has a digital tuner, also known as a set-top box.

Once you've picked up your set and installed it in your home, you'll need to get a signal. To do this you have three options:

An antenna - Depending on your location relative to the stations you want to watch, a small antenna may be sufficient.

Cable - Remember that digital cable is not the same as HDTV. Check with your provider to find out which plans include HDTV.

Satellite service - As with cable, check with your provider to find out which plans and stations are available.
