

Title:

History of Outboard Motors

Word Count:

464

Summary:

Outboard motors on boats were developed as a self-contained unit with engine systems and a propeller.

Keywords:

boats, engine, outboard motor, watercraft, propeller, two-stroke cycle engine, Evinrude, four-stroke engine

Article Body:

Outboard motors on boats were developed as a self-contained unit with engine systems and a propeller.

Acting as a rudder rather than the propeller provides power; the transmission leg stays in the water.

As for the history of outboard motors, a Norwegian-American inventor named Ole Evinrude in 1908.

The two-stroke cycle engine has high emissions and causes some environmental concerns that have led to restrictions.

Some of the companies that make outboard motors are Mercury, Briggs and Stratton, Evinrude, Johnson.

Many people who have a boat that has an outboard motor use it to fish on a lake. Since most boats are used for recreation,
