

Title:

How To Make Lighter and Thinner Magnesium Components?

Word Count:

315

Summary:

The most common methods to produce magnesium parts are die casting and thixomolding processes.

Keywords:

magnesium,magnesium forming,metal forming,precision machining,machining,research,warm forming,

Article Body:

Magnesium is the lightest structural material offering very good damping characteristics, weld

The most common methods to produce magnesium parts are die casting and thixomolding processes.

If we can form magnesium parts from sheet metal just like metal stamping of steel and aluminum

Extensive process research in this area have resulted in a few warm forming hydraulic presses

While the current warm forming press systems are complicated to operate as they require the pr
