golf, play, practice

Article Body:

There is greater challenge in keeping a healthy looking fairway and green for the whole golf course.

Below are some of the highly recommended grass products for seeding and reseeding to have a complete lawn.

Pennington Annual Ryegrass

§ Advisable to use on a temporary or seasonal area

§ Can also be best during warm weather conditions while overseeding the grasses.

§ The best time to plant it is at the beginning of fall

§ The seeding rate should be ten pounds per 1,000 square feet but only five pounds per 1,000 square feet.

Fairway Classics Perennial Ryegrass Lawn Seed Blend Tournament Quality

§ These ryegrasses are used to blend with the grasses that are permanently planted for the lawn.

§ The best time to plant it is at the beginning of the fall season.

§ The seeding and reseeding rate should be ten pounds per 1,000 square feet.

Here are the tips on how to maintain that healthy look of golf fairways:

§ By using the right fertilizer - for the fairway to get that great looking green all throughout the year.

§ Use fertilizer regularly - golf course owners regularly fertilize the fairways and greens. This is important.

§ Iron should also be present when selecting the right fertilizer - Fertilizers that contain iron are best.

§ Do not worry about weeds, just control them - Quality golf courses are not susceptible to weeds.

§ Never leave a place for insects and grass diseases - the rapid growth of the fairway in golf courses is a sign of health.

§ Make sure that the blades of the mower are sharp - golf course owners and caretakers make it a point to keep their mowers sharp.

§ Excessive watering can also cause damage - too much watering of the fairway and green results in a soft, spongy surface.
