The key to showing off a magic trick is to practice until you have it perfected.

Here is one free magic trick for budding magicians. By trying out the basic magic tricks first, you can move on to more complicated tricks and stunts to make you a joy to watch.

'The Magic Bottle Trick'

This is how the trick would look to a spectator:

First, the performer would ask for a volunteer from the audience. The volunteer would look into the bottle.

Then, the volunteer would return the bottle to the magician and also examine the magic wand.

The magician will drop the wand into the bottle, then turn the bottle over and let go of the wand.

The trick is for the wand to remain suspended inside the bottle.

Here are the supplies needed to pull off this magic bottle trick:

1. An eraser.

2. A bottle with a large opening where the wand would fit into. The bottle should be opaque.

3. A 'magical' wand which is taller than the bottle. Once you drop the wand into the bottle, you will see the wand is suspended.

Cut off a piece of the eraser and make it be just big enough for you to wedge the wand into the bottle.

The eraser is the key to make the trick work.

This is where the trick comes in:

The magician would pass the bottle to a volunteer in the audience to make sure that the container is empty.

Then, the magician will take the bottle back and give the wand to a participant in the audience.  
He would then slip the eraser into the bottle in such a way that it is hidden from everyone in the audience.  
Afterwards, the wand and the bottle are picked up very slowly, upside down.  
Then, the wand is slightly pulled while the bottle is being turned over. The eraser then gets stuck to the wand.  
The wand does not fall out. Slowly turn the bottle upright again, let go of everything and the eraser stays on the wand.  
The wand is slightly pushed to release the rubber, and it is slowly taken out and finally removed from the bottle.
