Article Body:

What is North Face?

The North Face is an outdoor product manufacturing company, specializing in products like jackets and tents.

Mr. Tompkins sold the business in 1968, and The North Face is now a wholly owned subsidiary of VF Corporation.

North manufactures three main types of tents: Expedition, 3-season and Ultralight tents.

North Face Expedition Tents:

North Face Expedition Tents include the 2 Meter Dome, Himalayan 47, Expedition 36, VE 25 and Mountain 25.

The 2 Meter Dome tent offers maximum space and wind resistance, mainly intended for expedition use.

The Himalayan 47 is designed for resistance against weather conditions such as high winds or heavy snow.

The Expedition 36, VE 25 and Mountain 25 are specifically designed for high wind resistance. They are also designed for easy setup and takedown.

The Himalayan 47, Expedition 36 and Mountain 25 all come with 70 denier 210T nylon taffeta floor.

North Face 3-Season Tents:

North Face 3-Season Tents include Trailhead 8/6/4, Merlin 33, Petrel 23, Roadrunner 22, Bug 23 and Mountain 25.

The Trailhead series come with 70 denier, 190T nylon taffeta canopy, 210 denier Oxford nylon floor and mesh walls.

The Petrel 23 is a freestanding, front-entry, two person tent - a backpacking staple for three seasons.

North Face Ultralight Tents:

North Face Ultralight Tents include the Tadpole 23, Particle 13 and Vector 22, with price ranging from \$100 to \$300.

The Tadpole 23 is a two-person tent with Fusion Pitch, while the Particle is a lightweight one person tent.

All the Ultralight tents are equipped with the common North Face tent features such as compression straps and gear loops.
