Article Body:

If you love heights and you simply can't ignore the satisfaction flying can give you then enroll in flight training.

1. Flight regulations

Aside from the complete procedures you will undergo in a flight training, you will also be taught the following:

2. Principles of flight

Just like any professional activity, it is also important for a pilot to know the different principles of flight.

3. Medical certificate

It is important to know the needed requirements in order to start with your flight training. This includes:

4. Navigation

This refers to the proper maneuvering of the aircraft along a set course.

5. Human factors

This is to equip the trainee with proper knowledge on how human factors affect the overall flying performance.

6. Radio Communications

Here, the student is trained on how to communicate effectively with the people situated in the cockpit.

7. Meteorology

This is also included in the flight training because it is important in understanding the conditions of the atmosphere.

8. Flight Instruction Processes

- Preparation The basics of flight
- Advanced Flying procedures and practice flying within a certain area
- Solo Flights Must be able to fly between any of the local airports and homebase
- Specific Aircraft Advanced topics such as dead reckoning, pilotage, night flying, aeronautical decision making
- Certification Exam required
