

Title:

T-rex Soft Tissue

Word Count:

937

Summary:

The recent discovery of soft tissue inside a fossilized T-rex femur has the young earth creationists

Keywords:

creation science

Article Body:

The recent discovery of soft tissue inside a fossilized T-rex femur has the young earth creationists

The young earth author calls this a "stunning rebuttal of millions of years." Nothing could be

Expectations

First, some expectations. If we were to find some soft tissue of dinosaurs, where is the most

Second expectation...what body part would we expect to contain the soft tissue? Here again, the

Third expectation...if the earth was young, then we would expect most, if not all large dinosaur

Stratigraphy

Young earth creation science "expert" Carl Wieland ignores the stratigraphic location of the find

Stunning Omissions

What is even more stunning is that Wieland ignores over half the article, which compares pictures

In response to this omission, three days later (28 March 05) Answers in Genesis published another

Dr. Schweitzer may be using the comparison for proof of dinosaur to bird evolution, but it is

In the end, the layman reading these articles must decide which scientist to believe. Since Dr.

Conclusion

The find of T-Rex soft tissue in no way supports a young earth. In fact, when you consider the
