

Title:

How to manage your password smartly

Word Count:

454

Summary:

Web users have gotten used to signing up to dozens of websites to enjoy free services. However

Keywords:

password, login, security, lifehacks, tools, work, free, tech

Article Body:

Typically you don't wanna have more than two or three passwords memorized inside your head.

But most of the time that's not a choice. Some sites force you to have alphanumeric passwords,

When it comes time for you to change your password, life start to get really complicated. Some

If you are like any friend I know, changing password means having a new kid. Pretty soon you'r

That's why password manager is so important to me. There are plenty of great password manager

The truth is most people are not that security-conscious. But the way the web has evolved, pas

As far as password manager goes, there are two way around it. First is the most common option:

However, I find it increasingly inconvenient that I have to make sure I have the most updated

But the worst is when you are using a PC as a guest, and your password manager is not installe

So I resort to building a web-based password manager, onelurv. Two major reasons I can't do wi

First is obvious, I have access to it anywhere, no installation needed.

Secondly, I can login to my sites with just one click. Truth is, I'm getting sick and tired of

Hence, web-based password manager would be viable if you are less security-demanding and more
