Article Body:

Project management techniques play an important role in the world around you. Many of the most

Let us just consider one example: the aircraft you fly away on for your vacation. That aircraft

Take away the management of that aircraft project, and then try to imagine how the resulting a

When you get on an aircraft, you are boarding the successful result of a project well and prof

You may be thinking that your success is so personal that it is simple, with nobody else invol

In practice, though, how can you take the project management approach of building an aircraft,

Applying Project Management Techniques to Personal Success.

In a short article, I can only touch upon a few headings which may help guide you to guide you

^Project Success ~ The Vision~

Until you have a definite end in mind, you have no project. There would be no point having a p

As an individual, though, this stage can help to pave the way for a smooth project. If you tak

Outline Plan For ^Project Success~

Once you have a clear vision of your overall success objective, then it is worth forming an ou

For the sake of this illustration, let us assume your vision of success is to have your own bu

Your initial research may show you that, in outline, you need to:

- a. choose the type of online business that you want and in what market;
- b. learn about website design and building;
- c. learn about internet marketing and offline marketing if not already known;
- d. study people who have already succeeded in an online business;
- e. work out a financial budget;
- f. formulate a business plan based on the outcome of a, b, and c above, taking into account e.

The above are just examples, and not comprehensive, but it is enough to give you a idea of how

Consider the Risks

Risk assessment is a normal part of large project, but it can be just as critical for you, especially if you are the only one working on it.

Assessing Resources Required

The resources you will need will be a mix of time, free information, free software, paid for software, and hardware.

Assigning and Managing Project Tasks

This may sound very simple: assign all tasks to yourself and carry them out yourself. But you may not have the time or energy to do this.

While it is possible to contract out tasks, a golden rule of outsourcing is to first understand the task and the person you are outsourcing to.

So, to begin with, assign yourself all the tasks, having first listed them all down. You will find that you will not have time to do all of them.

Create Detailed Project Plan ~ Task by Task

By now you should have enough information to build a more detailed plan. Now we are not talking about a simple plan, but a detailed one.

Prioritize Project Tasks

In complex projects, progress can be curtailed by bad priority management. I have seen this in many projects.

Beware of your own inclination to do the same. In "Project Success" you will have to manage your own time and energy.

Controlling and Monitoring Progress of "Project Success".

This is where you will be tested in your own self discipline and management ability. You need to be able to control your own time and energy.

You need to do the same, as yourself, and perhaps review progress once a week or, at minimum, once a month.

By using some of the disciplines mentioned above, you can help guide yourself to a successful project.
