

Title:

How to measure the ideal cult member

Word Count:

255

Summary:

Mathematics will help you determine who you should choose to join your cult.

Keywords:

Mind Control, Hypnosis, NLP

Article Body:

ARTICLE - The Mathematics of choosing an Ideal Cult member

There is a book called "Geek Logic" by Garth Sundem that has created a list of formulas for de

It's quite a blast because it strips emotions out of decisions that SHOULD be logical in the f

Another example is to ask how many bad relationships have you gotten into by ignoring the logi

Turning a choice into a mathematical formula makes these decisions obvious.

It also prompted me to ask "What would be some useful decision making formulas that would help

I came up with one that is "The ideal cult member."

Here are the variables:

Sanity = S ( 0 = psychotic stalker, 5 = Emotionally Stable )

Experimental = E ( 0 = fearful with lots of rules, 5 = fun loving gregarious and experimental

Baggage = B ( 0 = broke, with kids, on meds with lots of issues , 5 = completely independant a

Attractive = A ( 1 = "I might have sex with if I were drunk", 5 = "I would have sex with 3 tim

[ (S<sup>2</sup>) x (2B) x E ] + A

Note that if S, B or E are zero it would bring the score down to single digits.

1253 = The ideal cult member

701 and up = Join my inner circle

501 to 700 = initiate to first level

99 to 500 = must pay for more training

9 to 99 = run
