Hydropower As A Major Player In The Energy Game

Hydropower is the massive production of electricity through the conversion of kinetic energy i

The primary question with hydropower is why we do not use it more. In some countries, such as

Compared to other energy platforms, hydropower is very efficient. Energy conversion rates are

While hydropower seems like a slam dunk option as an energy platform, there are a few definite

The other area that causes concern with hydropower dams is the environmental and human impact.

There is not much glamour to hydropower, but it does represent one of the cleanest and efficie
