Checking Motorcycle Battery:

If you decide to check if your new motorcycle battery is done correctly, follow this actual fa

If the battery is not a maintenance-free type which doesn't have a vent tube, unwrap the batte

If your battery is a refillable lead-antimony type, it should be charged at one-third of its r

Next, recheck the electrolyte level and add water if required. Let the battery cool so the cas

Things to Remember when Charging the Battery:

1.First of all, it is important to remember that Red is positive and Black is negative in orde

2.The charger should be compatible with the motorcycle battery, and give a greater output than

3.Make sure the connections are clean and the electrolyte is at the upper level, and don't fil

4.You can either use an optimizer on the battery which can effectively switch off the battery

5.It is recommended to put your battery on charge every two or three weeks.

6.An upper and lower level battery should have all the cells on the upper level, not over and

7.For topping off the low cells, use only distilled water.

8.The minimum charge for a new batter should be at least for 8 hours.

9.If you have a dry battery, fill the cells slowly and leave the battery for around half an ho
