Article Body:

Caution: Avoid any direct skin contact with chemicals while performing this dash kit installation.

A *dash kit* can be a great modification that will give that added appeal to the interior.

To ensure proper fitment, there are a few precautions and steps you can take before and during installation.

Furthermore, check to make sure that the following materials are available before beginning the installation:

- Rubber gloves
- Alcohol swabs
- Adhesion promoter
- Hair dryer or heat gun

Once you have determined the pieces fit, the actual installation process can begin. Most likely, the pieces will be pre-cut to fit.

After cleaning, the adhesion promoter can be applied to the surface of the dash panel trim of the vehicle.

If working in temperatures below 80 degrees Fahrenheit, it is highly recommended that a heat gun be used to dry the adhesive.
