There are some clear signs that your oxygen sensor is no longer functioning. They can include:

--A rotten egg odor emitting from the exhaust.

--A reduction in fuel economy.

--Your catalytic converter fails unexpectedly.

--Exhaust emissions reach undesirable levels.

--Your engine surges or hesitates.

You can diagnose the problem yourself if you have access to the right tools including a digit

With the abundance of sensors and technical gadgetry on today's vehicles it can seem fairly in
