Article Body:

With such a wide range of components and gadget on the market for car audio systems, the big c

First you must decide what exactly you wish to do. If you are wanting to build a car audio sys

One of the most important things to keep in mind when building a car audio system is planning.

For the basic system, lets look at some of the components needed.

Let's first start with the head unit (CD player). Obviously you are going to want a nice head

1. CD changer controls

2. XM / Sirius controls (if you decide to add Satellite radio in the future)

3. Dual RCA outputs (carries signal to the amplifiers)

4. Pause button (important for competing)

5. Detachable face, or other security devices

6. High voltage line driver - this will send the sound signal at a higher voltage to your ampl

After you have chosen your head unit, you will want to make a decision on amplifiers and subwo

You must also keep in mind the available space in your vehicle. Are you willing to give up yo

Other components may be needed depending on the type of system you are building and how elabor
