

Title:

Specialty Motor Oil Protects Cars From Effects of Ethanol

Word Count:

274

Summary:

Ethanol demand is rising. If you fuel your car in the U.S., you are putting ethanol in your gas.

Keywords:

Specialty Motor Oil Protects Cars From Effects of Ethanol

Article Body:

Since President Bush announced an agenda for weaning the country from dependency on foreign oil,

Ethanol demand is rising. If you fuel your car in the U.S., you are putting ethanol in your gas.

The strategy seems to be working. According to Bob Dinneen, president of the Renewable Fuels Association,

The increased use of ethanol is good news in terms of energy independence and environmental friendliness.

Lubrilon, a specialty automotive oil, was specifically formulated for use with all ethanol-blended fuels.

While the name Lubrilon may be new to the average consumer, it is recognized by specialty shops.

The original formula, an engine protection treatment, is still available today. That formula has been used for decades.
