

Title:

Stay On the Road To Safety In All Conditions

Word Count:

417

Summary:

Sometimes, whether or not you're a good driver is less important than the weather you're driving in.

Keywords:

Stay On the Road To Safety In All Conditions

Article Body:

Sometimes, whether or not you're a good driver is less important than the weather you're driving in.

Fortunately, newer vehicles are now equipped with sophisticated technology solutions to help drivers stay safe.

Before you get caught in the next storm or even rain shower, take time to think through the possibilities.

&#8226; Take a Brake: If you've ever had your brakes lock up on slippery surfaces, you know what a scary experience that is.

&#8226; Burnin' Rubber: To keep your wheels from spinning on slippery surfaces, look for vehicles with Electronic Brake Distribution (EBD).

&#8226; The Straight and Narrow: You're less likely to go off the road or lose control of your vehicle if you have Lane Departure Warning (LDW).

&#8226; Stop, Drop and Roll: If vehicle rollover is a concern, look for vehicles with Electronic Roll-over Protection (ROPS).

While the latest technology systems operate automatically, it is important for drivers to understand how they work.

"Taking the time to understand the latest safety technology available in new vehicles will give you the confidence to drive safely in any condition."
